PROFESSIONAL SUMMARY

Python Backend Developer Intern with hands-on project experience in FastAPI, PostgreSQL, Redis, Docker, and REST API development. Currently building practical backend systems with authentication, data modeling, caching, API validation, and API testing.

TECHNICAL SKILLS

Languages: Python, C++

Backend Development: FastAPI, REST APIs, JWT Authentication, Pydantic

Databases: PostgreSQL, SQLAlchemy

Caching & Tools: Redis, Docker, Postman, Git, GitHub

App Development: Flutter, Firebase, UI Design, Local Storage, Authentication Screens

CS Fundamentals: Object-Oriented Programming, Data Structures and Algorithms, STL, Competitive Programming, Problem Solving

PROJECTS

AI-Powered Study Planner API

In Progress

Python, FastAPI, PostgreSQL, Redis, SQLAlchemy, JWT, Pydantic

- Building a backend API that generates personalized study plans based on subjects, deadlines, exam dates, and daily study availability.
- Designed JWT-based authentication and PostgreSQL models for users, subjects, tasks, deadlines, and progress tracking.
- Implementing priority-based scheduling logic to focus on weak subjects, upcoming deadlines, and revision planning.
- Using Redis to cache frequently accessed study plans and improve response time for repeated API requests.

API Monitoring & Uptime Tracker

In Progress

Python, FastAPI, PostgreSQL, Redis, Docker, SQLAlchemy

- Developing a backend system to monitor website and API uptime, response time, failure history, and service availability.
- Created REST APIs for adding monitored URLs, storing health-check logs, and viewing uptime statistics and downtime incidents.
- Designed relational models for users, monitored services, status logs, response times, and incident history.
- Containerizing the backend with Docker and using Redis to cache recent service status for faster dashboard reads.

Smart Expense Tracker with Fraud Detection

In Progress

Python, FastAPI, PostgreSQL, SQLAlchemy, JWT, Pydantic

- Building a secure expense tracking API with income tracking, expense logging, category-wise budgets, and spending summaries.
- Designed REST endpoints for transaction creation, category/date filtering, monthly reports, and budget management.
- Implementing anomaly-detection logic to flag unusual spending patterns using transaction amount, category, and frequency.
- Using Pydantic for request/response validation and Postman for API testing and endpoint verification.

Campus OS - Campus Workflow App

In Progress

Flutter, Firebase, Local Storage, UI Design

- Building a mobile app for students to manage attendance, events, timetables, notes, and complaint workflows.
- Designed mobile-first screens for student login, dashboard, academic updates, and daily campus activities.
- Integrated Firebase-based authentication screens and local storage for frequently accessed student-side data.

EDUCATION

IILM University, Greater Noida

2025 - 2029

Bachelor of Technology in Computer Science Engineering | Current Year: 2nd Year | First-Year CGPA: 8.05/10

SOFT SKILLS

Team Collaboration, Problem Solving, Communication
